

Exploring the Power of Travel APIs

How **Adivaha** connects airlines, hotels, transfers, activities, and more — through a single, intelligent digital interface built for the modern travel industry.

What Are Travel APIs?

Travel APIs (Application Programming Interfaces) are software bridges that allow travel platforms to communicate directly with service providers — airlines, hotels, car rentals, and activity suppliers.

They deliver real-time data — schedules, availability, rates, and instant confirmations — enabling OTAs, agencies, and corporate travel teams to build comprehensive, automated booking platforms with continuously updated global inventory.

> One integration. Unlimited supplier connectivity. Zero manual overhead.

Flight Booking API

Live Airline Inventory

Connects with GDS systems, airline consolidators, and direct carriers for real-time fares, schedules, and seat availability.

End-to-End Automation

Automates search, booking, modification, and cancellation — with instant ticket issuance and reduced booking delays.

Global Flight Connectivity

Supports multiple carriers and worldwide routes, scaling seamlessly for OTAs, agencies, and enterprise platforms.

Hotel & Travel Booking APIs

Hotel Booking API

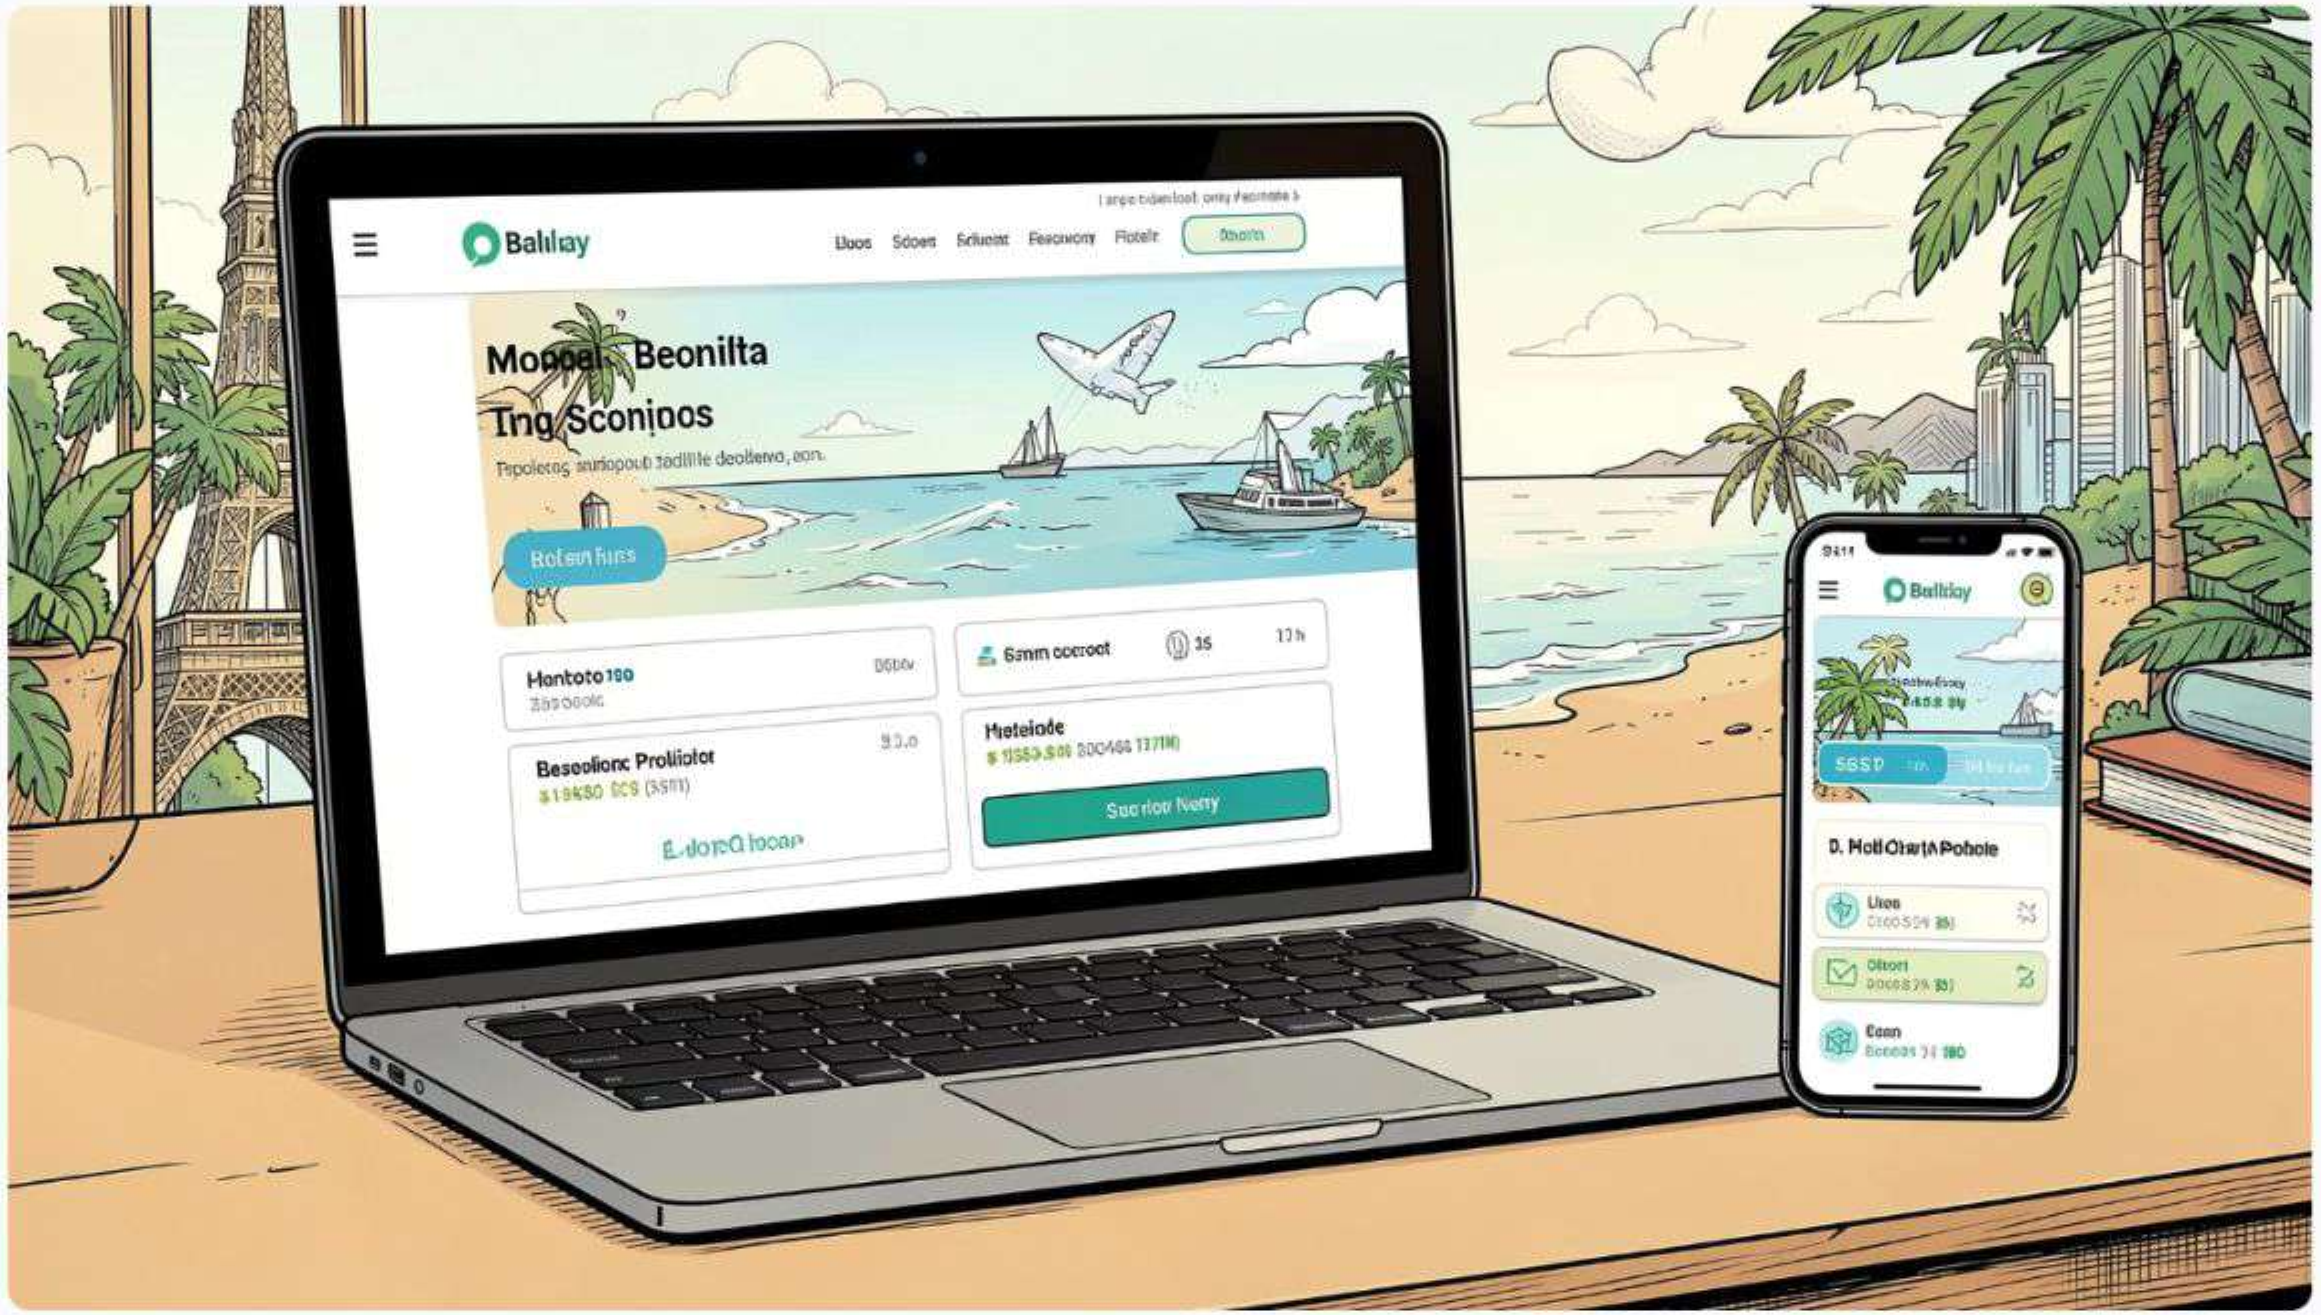

Access thousands of global hotel suppliers with real-time room availability, dynamic pricing, amenities, and instant confirmations. Supports multiple currencies, multilingual content, and advanced filtering for a seamless booking experience.

Travel Booking API

Unifies flights, hotels, transfers, activities, insurance, visas, and holiday packages into one integrated platform — eliminating separate integrations and enabling centralized, scalable booking operations.

Travel Portal API

A Travel Portal API gives developers and travel companies the tools to launch full-featured booking platforms — B2B, B2C, corporate, or white-label — with standardized integration.

- Real-time inventory, pricing, and booking confirmations
- Secure payment processing and reservation management
- Automation, reporting, and customer management
- Seamless connectivity with booking engines and GDSs

Key Benefits

Real-Time Inventory

Live availability synchronized with airlines, hotels, and GDSs — eliminating outdated data and booking failures.

Faster Booking Process

Search, compare, and confirm reservations in seconds — boosting conversion rates and customer satisfaction.

Global Supplier Connectivity

Access airlines, hotels, transfers, and activities worldwide through one unified platform.

Operational Automation

Automate ticketing, confirmations, cancellations, and notifications — reducing manual effort and costs.

Scalable Technology

Cloud-ready architecture that scales with your business — from startups to enterprise OTAs.

Core Features

Real-Time Search

Instant access to live schedules, availability, and pricing from multiple global suppliers.

Instant Booking

Confirm flights, hotels, and tours in real time with secure payments and automated ticketing.

Multi-Supplier Integration

Aggregate inventory from airlines, hotels, transfers, and activities through one unified API.

Secure Data Exchange

Encrypted communication and authentication protocols protect traveler and payment data.

Flexible Integration

REST and XML services for seamless connection with existing websites, apps, and CRM systems.

API Integration Services

Flight API

GDS, LCC, and consolidator connectivity with real-time search, booking, and ticketing.

Hotel API

Thousands of global suppliers with dynamic rates and automated reservations.

Transfer API

Airport and city transfers with real-time pricing and instant confirmations.

Activities API

Tours, attractions, and local experiences with instant booking and voucher generation.

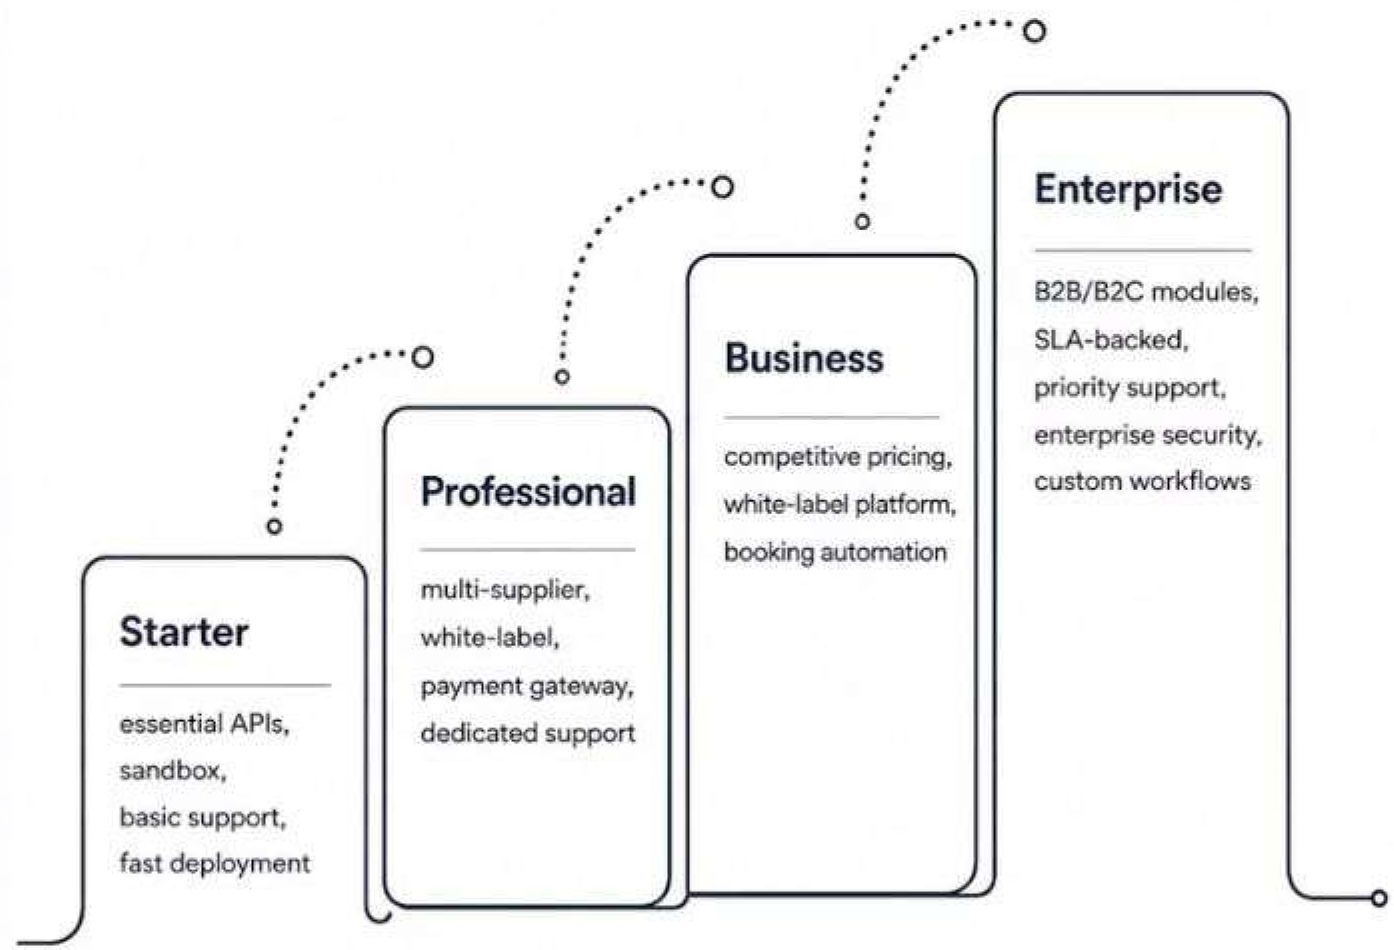

Insurance API

Real-time policy comparison, issuance, and secure transactions alongside bookings.

Package Options

Adivaha offers four tiered packages — from lean startup integrations to enterprise-grade deployments — each with real-time APIs, secure payments, and dedicated support.

> All packages include API documentation, sandbox access, and scalable architecture.

Build the Future of Travel Booking

Travel API development is no longer optional — it's the foundation of competitive, scalable travel businesses. By integrating Adivaha's Flight, Hotel, Transfer, and Activities APIs, agencies, OTAs, and corporate travel teams can automate operations, expand global inventory, and deliver seamless booking experiences.
